NATURAL WOOD ALTERNATIVES

For applications where wood is preferred, Wishbone has several options. **Stains or oils specified by the customer can optionally be applied by Wishbone during manufacture.** Contact us for further details.

MODIFIED PINE
NATURAL

MODIFIED PINE
GREY

Our Modified Pine is based on a proprietary process that transforms fast-growing, certified sustainable timber into a high performing lumber with superior hardness and durability characteristics. It comes with a 50 year rot resistance warranty.

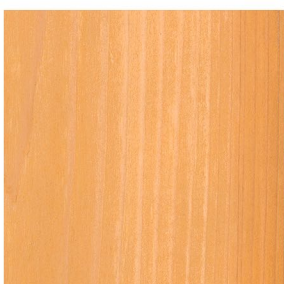

HARDENED BAMBOO
NATURAL

HARDENED BAMBOO
OILED

Hardened bamboo involves modifying full length bamboo strands under intense heat and pressure. It outperforms hardwoods for hardness, dimensional stability and fire resistance. Most significantly, it requires very little maintenance, can be sanded to remove graffiti or burn marks, and comes with a 25 year warranty.

RED CEDAR

Western Red Cedar is sourced from British Columbia and has excellent natural resistance to rot and decay. While softer than hardwoods, its superior durability, aesthetic beauty and dimensional stability make it an excellent choice for outdoor use, even without chemical treatment.
